

SUMMARY: RELEVANT SIGNALS (includes all signals rated ≥3.0)

No relevant events to report this week

NEW EVENTS: (events rated > 2)

Schmallenberg virus in the UK

Pathogen: virus; **Transmission:** vector - culicoides; **Species affected in event:** ovine

① Schmallenberg virus has affected farms in Somerset, with cases rising across the south west. Farmers are reporting a high number of cases across the south-west belt of England, from Devon and Somerset through to Herefordshire and Gloucestershire, with some farmers reporting 40% of their flock infected. Symptoms include: abortions, stillbirths, fetal abnormalities, reduced milk production, fever, and diarrhea.

CONTINUED EVENTS: (events rated ≥ 2.4)

Highly Pathogenic Avian Influenza in Antarctica

No. of Signals: 01

No. of weeks in report: 07

Avg. Rating: 2.8

• HPAI has been confirmed in one colony of Gentoo penguins and one colony of king penguins in [South Georgia](#)

Influenza A (H9N2) in China

No. of Signals: 04

No. of weeks in report: 53

Avg. Rating: 2.6

- [China](#) has reported four additional human cases of avian influenza (H9N2):
 - a six-year-old boy from Anhui whose symptoms began on January 3, 2024
 - a three-year-old boy from Guangxi whose symptoms began February 2, 2024
 - an eleven-year-old boy from Jiangxi whose symptoms began February 11, 2024
 - a three-year-old boy from Guangdong whose symptoms began February 17, 2024

Highly Pathogenic Avian Influenza in South America

No. of Signals: 03

No. of weeks in report: 64

Avg. Rating: 2.2 - 2.6

- The [Galapagos National Park](#) has closed two visiting sites on two islands where seabirds were found dead on beaches, triggering an alert of a suspected outbreak of HPAI
- [Brazil](#) has reported additional cases of HPAI H5N1 in wild birds

Foot and Mouth Disease in Africa

No. of Signals: 02

No. of weeks in report: 02

Avg. Rating: 2.0 - 2.3

- [Libya](#) has reported additional outbreaks of FMD serotype O, bringing the total number of outbreaks to 51 with 11,830 animals affected; vaccination has not been carried out and due to the upcoming Ramadan period in North Africa, an intensification of animal movement is expected in the area

Highly Pathogenic Avian Influenza in Europe

No. of Signals: 09

No. of weeks in report: 169

Avg. Rating: 1.6 - 2.3

- In [France](#), ~21.6 million commercial ducks have received their first dose of HPAI H5N1 vaccine; the country also recently lowered their [HPAI risk level](#) from “high” to “moderate”
- [Bulgaria](#) has reported HPAI H5N1 in domestic poultry
- [Scotland](#), [Poland](#), [Romania](#), and [Germany](#) have reported HPAI H5N1 in wild birds
- A summary of the overall HPAI situation in Europe is available [here](#)

Highly Pathogenic Avian Influenza in North America

No. of Signals: 04

No. of weeks in report: 107

Avg. Rating: 1.5 - 2.3

- [Canada](#) has not reported any new outbreaks of HPAI in domestic poultry over the last week
- Over the last week, the [USA](#) has reported outbreaks of HPAI in commercial poultry in: South Dakota(1); in WOA non-poultry in: Texas(1), Minnesota(1), and Oregon(1)
- In [Virginia](#), dead birds that have been washing ashore in Ocean View are being tested for HPAI

Highly Pathogenic Avian Influenza in Asia

No. of Signals: 02

No. of weeks in report: 133

Avg. Rating: 2.0 - 2.2

- [Japan](#) has reported HPAI H5N1 in domestic poultry in Hiroshima

Disclaimer

This intelligence report is intended to provide information to risk managers about emerging and zoonotic disease events that could pose a threat to Canada. It is based on information signals acquired and selected from twenty-one distinct disease surveillance sources via the Knowledge Integration using Web-based Intelligence (KIWI) tool hosted on the Canadian Network for Public Health Intelligence (CNPHI) informatics platform. The report is based on the activities of the CEZD Community of Practice and subject to change based on evolving user needs.
