

DAIRY SURVEILLANCE NETWORK

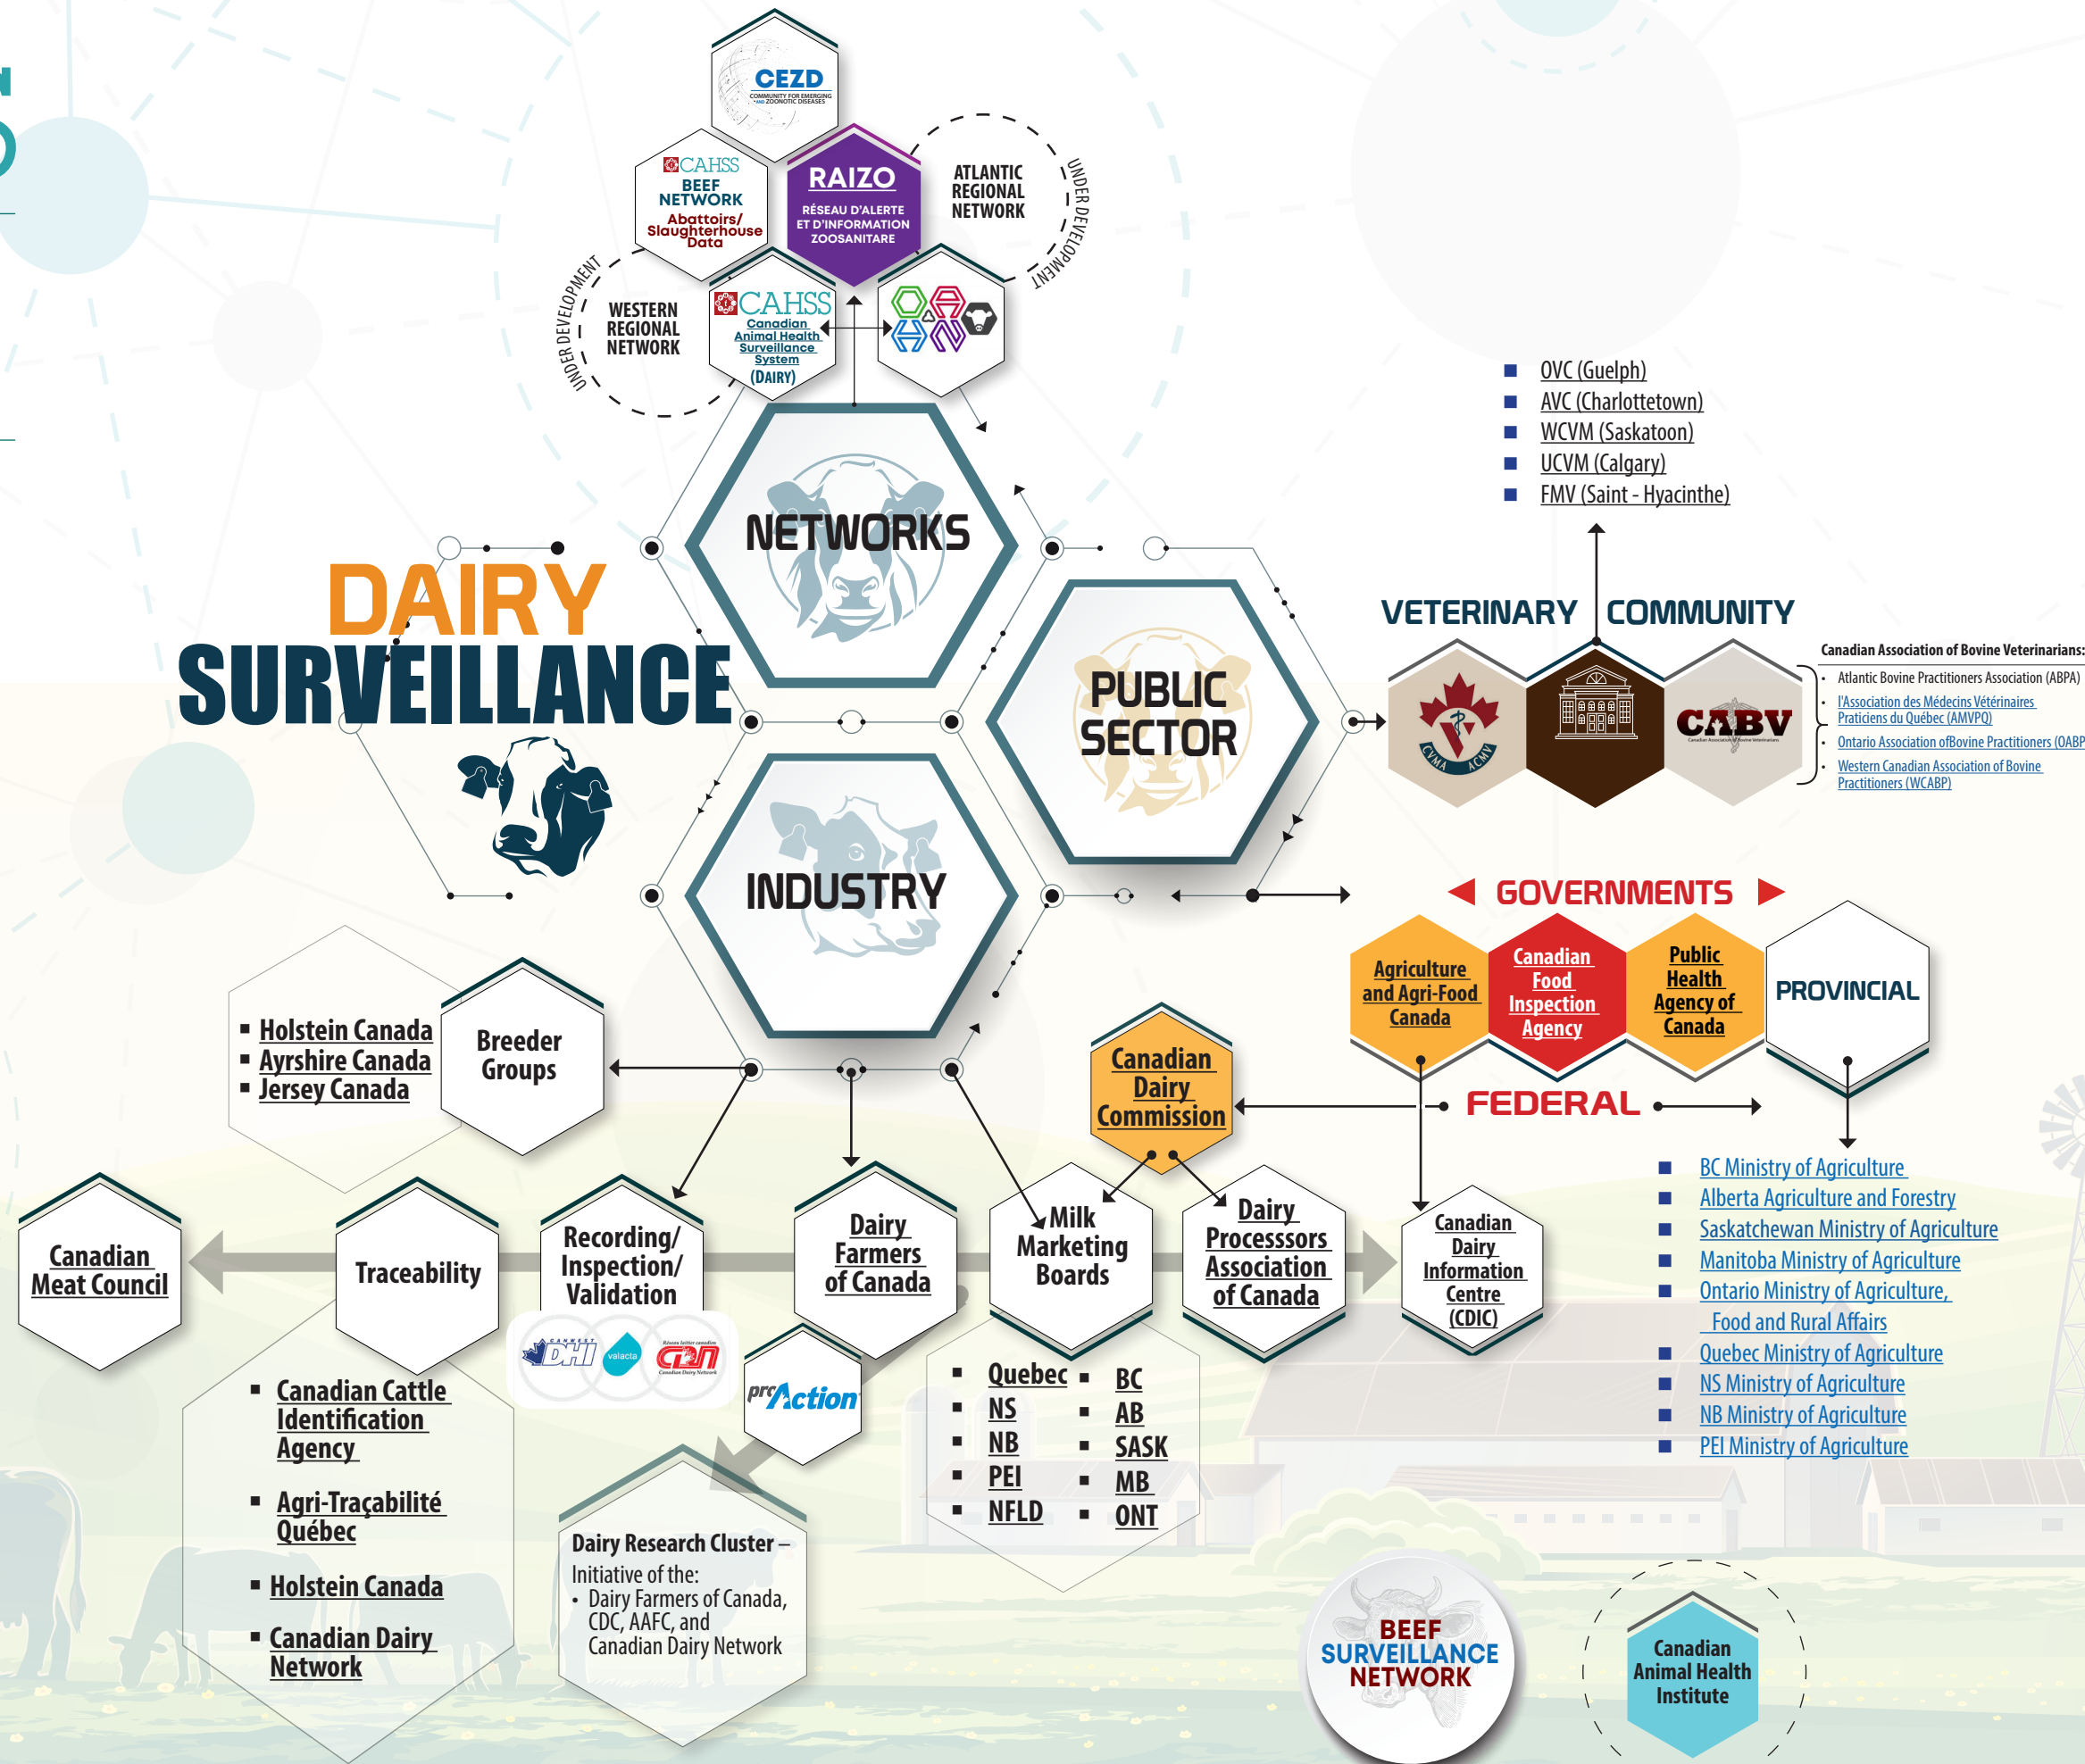

CONTEXT

The Dairy Network links the diverse dairy community to encourage and support integrated and whole-of-system dairy health surveillance. Effective and responsive dairy health surveillance safeguards the prosperity of Canada's dairy industry.

The CAHSS Dairy Network includes members from all areas from the Dairy Cattle sector, including Industry, Provincial, Federal, and Veterinary associations. The purpose of this group is to encourage sharing of information between Dairy Network members and to allow for a platform where members can access documents and events.

The Dairy Network is part of the Canadian Animal Health Surveillance System (CAHSS), which connects animal health, public health and wildlife health professionals from Canada's animal sectors. In addition to the Dairy Network, CAHSS member networks include poultry, swine, aquatic, and dairy cattle. CAHSS members work on diseases and issues of concern, including reportable and zoonotic diseases, production limiting diseases and antimicrobial use surveillance.

Advancing dairy industry knowledge, together
