

An Equine Infectious Anemia (EIA) affected premises has been identified in the province of Alberta. Please note the following information is in addition to what the Canadian Food Inspection Agency (CFIA) already communicates to stakeholders which includes:

- notification to the relevant provincial veterinary service of any newly affected premises
- monthly federally reportable disease updates on the CFIA website (10th of each month), which includes the number of affected premises as well as individual animal cases
- communications with the owners or persons directly involved in the case, as outlined in the current EIA program policy

On March 29, 2019, positive EIA results were confirmed by the CFIA's national reference laboratory for two horses located on a premises in Clear Hills County, Alberta. The horses had been sampled by an accredited veterinarian to comply with U.S. import conditions. No clinical signs of disease were noted at the time of sampling.

A CFIA investigation is underway and as per program policy, a quarantine has been placed on the infected horses and their on-premises contact animals. Initial reports indicate there are several equines on the affected premises. The quarantine will remain until all disease response activities have been completed, including follow-up testing and ordering the destruction of positive cases. Trace-out activities may require the CFIA to undertake actions at additional premises as outlined in the current policy.
